

SETTING THE HIGHEST STANDARDS ...

150 FEET UNDERGROUND.

WHAT DO YOU GET when you put together two 200-ton tunnel boring machines on a mile-long journey from First Avenue to the famed Grand Central Terminal in New York?

INCREASED CAPACITY for one of the nation's busiest commuter lines. A significantly shorter daily commute for over 160,000 passengers. Eight new tracks. A beautiful new station and concourse. And recognition as the Top Project in New York by *New York Construction* magazine.

FOR OVER 25 YEARS, JUDLAU has been involved in some of the most significant construction projects in the New York metro area, and for good reason: Outstanding team work, on-time performance, and unmatched attention to detail, safety and excellence.

HIGH STANDARDS, and a firm belief that nothing is impossible, are qualities JUDLAU brings to every project -- in the Northeast, across the country and around the world.
